

**Communicating  
With  
PORTSCOM**

# Four Methods Of Communicating With PORTSCOM

- Put MTF Messages on Disk and Submit to a Government Communications Center
- Conduct Non-Secure Point-to-Point Data Exchanges with another PORTSCOM Unit
- Conduct Secure Point-to-Point Data Exchanges with another PORTSCOM Unit
- Attach Files to CC:Mail Message and send through an MSC CC:Mail Post Office

# Submit MTF Messages on Disk to Comm Center

- Advantages

- Highly reliable
- Can easily feed automated Command and Control Systems
- Can handle classified materials

- Disadvantages

- Can only transfer Military/Naval Messages
- Must have access to a Communications Center

# Non-Secure Point-to-Point Data Exchange

- Advantages
  - Will know when messages have arrived at the destination site
  - Can handle many file formats
  - Does not need a supporting communications center
  - Can transfer data relatively fast
- Disadvantages
  - Does not handle Classified Data
  - May have to conduct numerous point-to-point transfers to get message sent to all addressees
  - Need to connect to another PORTSCOM unit
  - Must have access a telephone line.

# Secure Point-to-Point Data Exchange

- Advantages

- Will know when messages have arrived at the destination site
- Can handle many file formats
- Does not need a supporting communications center
- Handles Classified data

- Disadvantages

- Data transfer is very slow
- May have to conduct numerous point-to-point transfers to get message sent to all addressees
- Need to connect to another PORTSCOM unit
- Must have access a telephone line.

# Attach Files to CC:Mail Message and Transfer Through MSC Comms

- Advantages
  - One transmission to many users
  - Can transmit message to users on the Internet
  - Relatively fast communications
- Disadvantages
  - Can only handle Unclassified data
  - Must be able to access MSC Mail System

**For Messages, What Data  
Format Should Be Used For  
Information Exchange Between  
Units?**

# **For Messages, What Data Format Should Be Used For Information Exchange Between Units?**

Message Text Format!!

# **For Messages, What Data Format Should Be Used For Information Exchange Between Units?**

**Message Text Format!!**

- Format is constructed to provide all needed data elements**
- Format can be read and processed by humans and computers**
- No telling where your message will end up going after you transmit it.**
- You may have to shift from Unclassified to Classified Operations, which may require a Comms Center**

# Point to Point Data Transfer

## ● The Process

- Generate the messages you want to transfer.
- Group all messages going to the same place.
- Create a CONTROL.ZIP or HOST.ZIP file and put this file in the C:\OUTGOING directory.
- Clean out your C:\INCOMING directory.
- Conduct a Secure/Non-Secure Control or Host Transfer the destination site.
- Locate the CONTROL.ZIP or HOST.ZIP file in the C:\INCOMING directory.
- Unzip this file to obtain your incoming messages.

# Manual or Operator-Assisted Calls

- Potential Situations

- You have to physically talk to an Operator to place the call.
- The PORTSCOM organization is within a large office organization, so you have to dial an extension number to “ring” the PORTSCOM organization.
